Customer Reviews

SEO is not new. However, like everything else in the technical world, new acronyms, new terms, new "names" are coined for the same old stuff every day. Which is why Jason McDonald is correct when he says that the basics of SEO are the same as they always have been. Why buy this workbook? Because it's a cookbook for "doing" SEO. You can grab a bunch of ingredients and try to cook a soufflé. With perseverance you might one day be invited to compete on Master Chef. However, unless you know what ingredients go into a soufflé you will be wasting lots of money and throwing away tons of inedible creations. I grew up with computers in the days of the mainframe. My

father worked in the "military industrial complex". Eventually, I became a software engineer myself, built my own desktop computers down to the board level. I also established my own bulletin board system (BBS). When the Internet came along, I was there. I did not invent it, but I read the industry journals and jumped on the bandwagon. SEO was not called SEO back then. I don't remember calling it anything in particular back then. It was just what one did to get the search engines to find and index your website pages. This book, IMHO, is not just adequate or good but GREAT for several reasons. Mr. McDonald is encouraging. He knows that SEO is something everyone can do. He's entertaining and makes you laugh and relax your way through the process of "doing" SEO; it's virtually impossible to make progress in any endeavor when you are tied up in knots, and feeling overwhelmed, helpless and inadequate to the task. In addition to all the information in the book itself, he has links to the worksheets on his website.
