How To Survive A Robot Uprising: Tips On Defending Yourself Against The Coming Rebellion

Synopsis

How do you spot a robot mimicking a human? How do you recognize and then deactivate a rebel servant robot? How do you escape a murderous "smart" house, or evade a swarm of marauding robotic flies? In this dryly hilarious survival guide, roboticist Daniel H. Wilson teaches worried humans the keys to quashing a robot mutiny. From treating laser wounds to fooling face and speech recognition, besting robot logic to engaging in hand-to-pincer combat, *How to Survive a Robot Uprising* covers every possible doomsday scenario facing the newest endangered species: humans. And with its thorough overview of current robot prototypes-including giant walkers, insect, gecko, and snake robots-*How to Survive a Robot Uprising* is also a witty yet legitimate introduction to contemporary robotics. Full of charming illustrations, and referencing some of the most famous robots in pop-culture, *How to Survive a Robot Uprising* is a one-of-a-kind book that is sure to be a hit with all ages. *How to Survive a Robot Uprising* was named as an ALA Quick Pick for Reluctant Readers. Daniel H. Wilson is a Ph.D. candidate at the Robotics Institute of Carnegie Mellon University, where he has received master's degrees in Robotics and Data Mining. He has worked in top research laboratories, including Microsoft Research, the Palo Alto Research Center (PARC), and Intel Research Seattle. Daniel currently lives with several unsuspecting roommates in a fully wired smart house in Pittsburgh, Pennsylvania. This is his first book. Two-color illustrations throughout. The good news is that robots lack emotions, so they can't get PO'd about how the human race has been exploiting them. The bad news is that they are smarter and more logical than we are - and might someday realize that there are a million and one reasons why we don't need to exist. Welcome to your near future. Do you know how you will survive the robot uprising? First, know your enemy. Recognize that robots have "natural" weaknesses - lack of context/social adaptability, physical limitations over certain types of terrain - that humans can exploit to advantage. Be aware also that they may have certain strengths that humans lack; after all, that is what they are built for in the first place, isn't it? They do not need to sleep, for example, and therefore can perform tasks for a potential 24/7. Robots also may have "superhuman" abilities. Some robots can track your heat signature with thermal imaging cameras, mine credit card databases for information about you, turn built-in lasers on you, and of course, best you physically in a hand-to-hand combat situation with metal pincers and/or superior strength. *How To Survive a Robot Uprising* is soaked with information about current robotics and the trends that are now under development so that you can plan alternatives. Next, avoid aiding your enemy unawares. They have been infiltrating our factories, offices and homes for years. They are pretty much everywhere now, and they will be able to link up with and/or control devices that go where they cannot. What will you do on that day when your cell phone signals your location to the evil supercomputer that controls the laser-armed satellites? Or when your Smart House locks you in and "leaks" the gas from your heater?
